

Finn Chamber[®] is a patch test device which provides good occlusion because of the chamber design. The 8 mm inner diameter provides a 50 mm² area and about 20 µl volume. Finn Chambers are available mounted on Scanpor[®] tape as well as polyurethane tape. The chambers are made of aluminum. Polypropylene coated chambers (8, 12, 18 mm) and 12 mm aluminum chambers are available for special purposes.
